1.0 EXECUTIVE SUMMARY

The Texas Department of Transportation (TxDOT) plans to reconstruct Memorial Drive from the West Sam Houston Parkway North northbound feeder road to approximately 100 feet east of Tallowood Drive in Western Harris County, Texas (referred to herein as the Subject Right-of-Way). Figure 1 (Appendix A) shows a site vicinity map with the approximate project limits. Figures 2a and 2b (Appendix A) show the location of the Subject Right-of-Way on aerial photographs.

The project began as a City of Houston Project, (TIRZ17). Aviles Engineering Corporation (AEC) performed a Phase I Environmental Site Assessment (ESA-I) of the Subject Right-of-Way (AEC ESA-I report E102-15 dated October 26, 2015) in which the following recognized environmental conditions (RECs) were identified in connection with the Subject Right-of-Way (Figures 2a and 2b in Appendix A):

- REC #1: Chevron LPST site/Wheatley Investments at 12860 Memorial Drive
- REC #2: The contaminant plume associated with leaks from Your Valet Cleaners at 614 West Bough Lane and A-1 Cleaners LPST and VCP site at 12754 Memorial Drive
- REC #3: Sprint PCS Tower IOP site at 608 West Bough Lane
- REC #4: Mobil gas station at 12802 Memorial Drive
- REC #5: The contaminant plume associated with Conoco 43059 at 12699 Memorial Drive LPST site
- REC #6: Alexan Memorial Bend Apartments IOP site at 12667 Memorial Drive
- REC #7: The contaminant plume associated with the MW Cleaners/Lantern Lane Shopping Center-Pro Cleaners VCP and IHWCA site at 12534 Memorial Drive and the Memorial Green VCP site at 12601 Memorial Drive.

The ESA-I recommended that a Limited Phase II Environmental Site Assessment (ESA-II) be conducted with the installation of soil borings and temporary groundwater sampling wells approximately every 100 feet in the Subject Right-of-Way adjacent to or near each REC.

During a meeting on February 16, 2017 between the City of Houston, Public Works, Geo-Environmental (COH); Lockwood, Andrews, & Newnam, Inc. (LAN); and AEC personnel, the COH determined that RECs #2, #3, #4, and #7 should be considered as potentially petroleum contaminated areas (PPCAs) without any further drilling or sampling since the ESA-I revealed that contamination had crossed Memorial Drive and into the area south of Memorial Drive. COH personnel also indicated that if there was evidence of contamination under Memorial Drive at REC #5, that it also should be considered a PPCA without additional drilling or sampling. After the meeting, AEC reviewed the ESA-I and determined that there were monitor wells located on the eastern side of Memorial Drive at REC #5, therefore REC #5 was identified as a PPCA without additional drilling or sampling.

The COH approved AEC proposal E16-06-03R dated February 21, 2017 for a Limited ESA-II to drill three soil borings and convert one to a temporary monitor well at each of RECs #1 and #6 (Figures 2a and 2b in Attachment A).

The Limited ESA-II was completed and summarized in a report dated May 24, 2018 (AEC ESA-II report E101-17). Groundwater contaminated with benzene, toluene, m- & p- xylenes, total xylenes, and methyl tertiary butyl ether (MTBE) was encountered in the temporary monitoring well at B-2 of REC #1. Petroleum product odor was also detected in the soil of boring B-2 from 26 to 28 feet below grade surface (bgs). Therefore, REC #1 was designated as PPCA #1. Concentrations of contaminants analyzed in soil and groundwater samples from REC #6 were below laboratory detection limits and therefore was not designated as a PPCA. The PPCAs identified by the COH prior to the ESA-II and by AEC during the ESA-II are shown in Figures 3a and 3b (Appendix A) and include:

- PPCA #1: Chevron LPST site/Wheatley Investments at 12860 Memorial Drive
- PPCA #2: The contaminant plume associated with leaks from Your Valet Cleaners at 614 West Bough Lane and A-1 Cleaners LPST and VCP site at 12754 Memorial Drive
- PPCA #3: Sprint PCS Tower IOP site at 608 West Bough Lane
- PPCA #4: Mobil gas station at 12802 Memorial Drive
- PPCA #5: The contaminant plume associated with Conoco 43059 LPST site at 12699 Memorial Drive.
- PPCA #6: The contaminant plume associated with the MW Cleaners/Lantern Lane Shopping Center-Pro Cleaners VCP and IHWCA site at 12534 Memorial Drive and the Memorial Green VCP site at 12601 Memorial Drive.

After TxDOT became involved, a meeting between LAN, TxDOT, and AEC personnel was held on April 2, 2019 to discuss the Memorial Drive reconstruction project. It was determined that the PPCAs as defined in the 2017 Limited ESA-II were inadequate to predict the amount of contaminated soil and groundwater which might be encountered during construction activities and to calculate the associated construction costs of excavating, removal, handling, and disposing of impacted soil and groundwater. An Additional ESA-II was recommended to further delineate the extent of PPCAs #2, #3, #4, #5, and #6 (refer to Figures 3a and 3b in Appendix A).

This report summarizes the activities and presents the results of the Additional ESA-II and also includes information from the 2017 Limited ESA-II in order to update the environmental assessment of the Subject Right-of-Way.

AEC has performed this Additional ESA-II investigation of the Subject Right-of-Way in general accordance with ASTM Standard Practice E1903-11 and Chapter 11 – Geotechnical and Environmental Requirements of the City of Houston Department of Public Works and Engineering Infrastructure Design Manual (July 1, 2018) to be consistent with the previously conducted Limited ESA-II.

During the Additional ESA-II, a total of 25 soil borings (borings B-7 through B-31) were drilled to depths of 12 to 26 feet below grade surface (borings B-1 through B-6 had been drilled to depths of 20 to 28 feet below grade surface during the 2017 Limited ESA-II) and a soil sample was collected from each. The soils encountered during drilling in the Additional ESA-II (as well as the previous Limited ESA-II) were mainly sandy clay. Sand and/or silt layers, seams, partings and/or pockets were observed in the soils of each of the borings (a gravel seam was encountered in 2017 in B-1). Photoionization detector (PID) readings were less than or equal to 5.8 parts per million (ppm) in

each of the soil intervals measured from soil cores from boring locations B-1 through B-31 except for at borings B-22 and B-23 which had PIDs as high as 472 and 291 ppm, respectively. Petroleum product odors of varying intensities were detected in some of the soils at boring B-2 (2017), B-22, B-23, and B-24 (near areas of former or existing gasoline stations). Some of the odors in B-22 and B-23 were very strong. An unidentified odor was detected in some of the soils from boring B-14, B-26, B-27, B-29, and B-30 (near existing dry cleaner and voluntary cleanup program, VCP, sites). Soil samples collected from borings B-1 through B-3 (2017) and B-19 through B-24 were analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tertiary butyl ether (MTBE), and total petroleum hydrocarbons (TPH) 1005. Soil samples collected from B-4 (2017) through B-6 (2017), B-7 through B-18, and B-25 through B-31 were each analyzed for volatile organic compounds (VOCs) and TPH 1005. The soil sample from B-31 was inadvertently analyzed after its holding time had expired, however this does not have much impact on the conclusions as explained later. The laboratory analysis results of the soil samples showed that the concentrations of ethylbenzene, m- & p-xylenes, total xylenes, and TPH C6-C12 and C6-C35 fractions at boring B-22, 23 to 24 feet below grade surface (bgs); and concentrations of toluene, ethylbenzene, m- & p-xylenes, o-xylenes, total xylenes, and TPH C6-C12 and C6-C35 fractions at B-23, 23 to 24 feet bgs exceeded their respective laboratory detection limits. The concentration of VOC compound cis-1, 2-dichloroethylene in the soil sample from B-30, 18 to 19 feet bgs exceeded its laboratory detection limit. Each of the remaining BTEX, MTBE, TPH 1005, and VOCs concentrations were below laboratory detection limits.

Each of soil borings B-2 (2017), B-5 (2017), and B-7 through B-31 were converted to a temporary monitoring well and a groundwater sample was collected from each that yielded groundwater. Groundwater samples collected from B-2 (2017), and B-19 through B-24 were each analyzed for BTEX, MTBE, and TPH 1005. Each groundwater sample from temporary monitoring wells B-5 (2017), B-7 through B-18 and B-25 through B-31 were analyzed for VOCs and TPH 1005. The laboratory analysis results of the samples showed that concentrations of benzene, toluene, m- & p-xylenes, total xylenes, and MTBE in B-2; benzene, toluene, ethylbenzene, m- & p-xylenes, o-xylenes, total xylenes, and TPH C6-C12 and C6-C35 fractions in B-22; benzene, toluene, ethylbenzene, m- & p-xylenes, o-xylenes, total xylenes, and TPH C6-C12 and C6-C35 fractions in B-23 were above laboratory detection limits. Each of the remaining BTEX, MTBE, TPH 1005, and all of the VOCs concentrations were below laboratory detection limits.

Disposal of the waste soil and wastewater generated during the Additional ESA-II is in progress at the time of report preparation. Waste soil from boring B-2 of the 2017 Limited ESA-II was disposed via a waste manifest in a properly licensed facility and the manifest was attached in the 2017 report. The remaining 2017 soil was disposed of as solid waste. One 5-gallon bucket of wastewater was generated during the 2017 drilling activities, but its contents leaked from a hole which developed in the bucket. The bucket was located on a concrete surface which slopes to a storm sewer drain, therefore the leaked contents of the bucket would have been confined to the concrete pavement and flowed into the storm drain. The wastewater was a mixture of contaminated and uncontaminated groundwater and decontamination water from the drilling and sampling activities so the contamination in the water would have been highly diluted when entering the storm sewer.

Based on the guidelines provided by the City of Houston (the originator of the project), the results of the AEC ESA-I report dated March 25, 2015; the results of the 2017 Limited ESA-II, and the results of this Additional ESA-II, AEC has revised the extent of the potentially petroleum contaminated areas (PPCAs) along the Subject Right-of-Way identified in the 2017 Limited ESA-II. Figures 3a and 3b in Appendix A show the approximate extents of the PPCAs in the 2017 Limited ESA-II. Figures 4a and 4b in Appendix A shows the approximate extents of the revised PPCAs. Figures 5 through 19 in Appendix A shows the revised extents of the PPCAs plotted in more detail on the latest plans and profiles provided to AEC by LAN. The boundaries of each PPCA are the first “clean” (laboratory results are below laboratory detection limits and no odors were detected in either soil or groundwater) boring location beyond the impacted soil and/or groundwater or the Subject Right-of-Way boundaries. The following is a summary of the revised PPCAs.

- **PPCA #1:** This PPCA was determined in the 2017 Limited ESA-II and extends from Station 1+95.3 to Station 3+63.7 (Figures 4a and 4b, 5 and 6 in Appendix A). Benzene, toluene, m- & p-xylanes, and methyl tertiary butyl ether contamination were detected in the groundwater and a petroleum product odor was noted in the soil of boring B-2 from 26 to 28 feet bgs near the Chevron Station at 12860 Memorial Drive. The laboratory analysis of the soil sample collected at the highest PID reading (as is standard practice) from boring B-2 did not exhibit any contaminant concentrations above laboratory detection limits, however, the highest PID measured was not at the location of the petroleum product odor. Therefore, something else (e.g. organic matter in the soil or instrument electronic drift) caused the highest PID reading. Due to the petroleum product odor in the soil, the entire soil column in the PPCA should be assumed to be contaminated in addition to the groundwater unless proven otherwise during construction activities.
- **PPCAs #2, #3, and #4:** These three PPCAs are adjacent to each other and the exact boundaries between each cannot be readily determined, and therefore are grouped together. The releases comprising these PPCAs were from dry cleaners and a former gasoline station. Soil borings/temporary monitoring wells B-7 through B-18 were drilled/installed during the Additional ESA-II. The extent of the PPCAs in the 2017 Limited ESA-II extended from Station 7+37.3 to Station 17+74.6 on the project plans and profiles (approximate extent shown on Figures 3a and 3b in Appendix A). The revised extent of the 3PPCAs is from Station 13+93.8 to Station 15+22.6 along Memorial Drive and from the end of the Subject Right-of-Way on West Bough Lane to the end of the Subject Right-of Way on Broken Bough Drive (Figures 4a and 4b, 7, 8, and 9 in Appendix A; No station numbers are shown on the plans and profiles provided for the project on Broken Bough Drive and West Bough Lane.). VOCs and TPH concentrations in each of the soil and groundwater samples collected were below laboratory detection limits. However, an unidentified odor was detected in the soils from 17 to 18 and 18.5 to 19 feet bgs at boring B-14 right above and associated with some damp soil. As in PPCA #1, the soil sample collected from the highest PID did not exhibit any odor and therefore the sample collected may have missed the contamination. Therefore as a precaution, the soil from the base of the pavement to 5 feet below the deepest proposed utility in revised PPCAs #2, 3, and 4 (Figures 4a and 4b, 7, 8, and 9 in Appendix A) should be considered as contaminated. None of the groundwater samples collected during the Additional ESA-II exhibited any VOCs or TPH concentrations above laboratory detection limits.

However, it should be noted that groundwater samples could only be collected from the temporary monitoring wells at borings B-15 at the border of the revised PPCAs and B-18 outside the revised PPCAs but inside the original PPCAs boundary, since these were the only wells to collect water; all the other temporary monitoring wells were dry one-quarter to one hour after drilling was completed. Groundwater was encountered during drilling at B-9, but no water collected in the completed boring or installed temporary monitoring well. Damp soils were observed at borings B-13 at the edge revised PPCA and B-14 in the revised PPCA, but no water collected in the completed borings or installed temporary monitoring wells. It should be noted that soils in B-13 and B-14 in the revised PPCAs, and other dry borings (B-7, B-8, B-10 through B-12, B-16 and B-17) outside the revised PPCAs, but within the original PPCA could have yielded groundwater if left open for a longer period of time. Therefore during construction, groundwater could collect in these areas in trenches and auger boreholes installed and drilled during construction activities. Or some of these boring locations could yield groundwater during construction activities if the utilities are placed deeper than that shown on the plans and profiles given to AEC by LAN. If groundwater collects in a construction trench or auger borehole in the revised PPCAs, it should be considered as contaminated. If groundwater collects in any construction trench or auger borehole in areas outside the revised PPCAs, then that groundwater should be consider as contaminated, unless proven otherwise and the extent of the revised PPCAs enlarged. The vertical extent of the revised PPCAs extends from below the pavement to 5 feet below the deepest utility to be installed during construction activities in these revised PPCAs.

- **PPCA #5:** This PPCA is associated with a gasoline leak from a former Conoco station at 12699 Memorial Drive. Soil borings/temporary monitoring wells B-19 through B-24 were drilled/installed during the Additional ESA-II. The extent of the PPCA in the 2017 Limited ESA-II extended from Station 27+06.2 to Station 31+60.6 on the project plans and profiles (approximate extent shown on Figures 3a and 3b in Appendix A). The revised extent of the PPCA is from Station 28+22.5 to Station 33+09.5 along Memorial Drive and to the end of the Subject Right-of-Way on Boheme Drive (no station numbers given on plans and profiles for Boheme Drive; Figures 4a and 4b, 10 through 15 in Appendix A). Ethylbenzene, m- & p-xylenes, total xylenes, and TPH (C6-C12 and C6-C35 fractions) concentrations exceeded laboratory detection limits in the soil sample from B-22 and toluene, ethylbenzene, m- & p-xylenes, o-xylenes, total xylenes, and TPH (C6-C12 and C6-C35 fractions) concentrations exceeded laboratory detection limits in the soil sample from B-23. Very high PID readings and slight to very strong petroleum product odors were detected in some of the soils from B-22 and B-23 and a petroleum product odor was detected in some of the soils in B-24 (Lab results were nondetected which is believed to be because the soil sample was collected at the highest PID reading which was not where the odors were detected). Benzene, toluene, ethylbenzene, m- & p-xylenes, total xylenes, and TPH (C6-C12 and C6-C35 fractions) concentrations exceeded laboratory detection limits in the groundwater sample from B-22 and benzene, toluene, ethylbenzene, m- & p-xylenes, o-xylenes, total xylenes, and TPH (C6-C12 and C6-C35 fractions) concentrations exceeded laboratory detection limits in the groundwater sample from B-23. In addition, a petroleum product odor was detected in the groundwater sample of B-22, B-23, and B-24. The vertical extent of the revised PPCA extends from

below the pavement to 5 feet below the deepest utility to be installed during construction activities in the revised PPCA.

- **PPCA #6:** This PPCA is associated with a dry cleaner leak from MW Cleaners/Pro Cleaners at 12534 Memorial Drive and a VCP site at 12601 Memorial Drive. Soil borings/temporary monitoring wells B-25 through B-31 were drilled/installed during the Additional ESA-II. The extent of the 2017 PPCA was from Station 42+40.4 to Station 49+72.8 (the eastern end of the Subject Right-of-Way) along Memorial Drive (approximate extent shown on Figures 3a and 3b in Appendix A). The revised extent of the PPCA is from Station 42+21.5 to Station 49+72.8 (the eastern end of the Subject Right-of-Way) along Memorial Drive and to the edge of the Subject Right-of-Way on Sommerset Place, Legend Lane, Tallowood Road and the driveway entrance due south of Tallowood Drive (no station numbers given on plans and profiles for Sommerset Place, Legend Lane, Tallowood Road and the driveway entrance due south of Tallowood Road; Figures 4a and 4b, 16 through 19 in Appendix A). A slight undetermined odor was detected in some of the soils from B-26, B-27, B-29, and B-30. The VOC compound cis-1, 2-dichloroethylene was detected above laboratory detection limits in the soil sample from boring B-30. The soil sample (no groundwater encountered) from boring B-31 was inadvertently analyzed after holding times had expired, however this does not have much impact on the extent of the revised PPCA. The soil in boring B-30 was contaminated with a VOC. If the soil sample from B-31 had been analyzed within its holding time and all concentrations were below laboratory detection limits, the B-31 would have been the eastern extent of the revised PPCA. If concentrations of the sample were above laboratory detection limits, then the eastern extent of the revised PPCA would have been the eastern end of the Subject Right-of-Way. According to the plans and profiles received there is only approximately 14 feet difference between the two different boundaries. Given this situation, AEC has placed the edge of the revised PPCA at the more conservative eastern end of the Subject Right-of-Way. The VOCs and TPH concentrations in the groundwater samples collected from each temporary monitoring well installed were below their respective laboratory detection limits. No odors were detected in the groundwater. The vertical extent of the revised PPCA is the soil from beneath the pavement to 5 feet below the deepest utility to be installed at the revised PPCA. Based on the laboratory analyses results, the groundwater does not appear to be contaminated to the depths the borings were drilled to (5 feet below the deepest nearest proposed utility). Contamination from dry cleaners is denser than water and sinks deeper with time, therefore, AEC believes that groundwater deeper than the proposed deepest utility may be contaminated. If during construction, the utilities are set at a depth deeper than drilled during the additional ESA-II, then the groundwater encountered should be considered as contaminated unless proven otherwise during construction activities.

For this construction project, the contractor should follow the Texas Department of Transportation (TxDOT) Specifications for 1) safety (workers and public), 2) selections of proper pipes and gaskets, and 3) legal disposal of the wastes generated.

2.0 INTRODUCTION

2.1 Project Background and Location

The Texas Department of Transportation (TxDOT) plans to reconstruct Memorial Drive from the West Sam Houston Parkway North northbound feeder road to approximately 100 feet east of Tallowood Drive in Western Harris County, Texas (referred to herein as the Subject Right-of-Way). Figure 1 (Appendix A) shows a site vicinity map with the approximate project limits. Figures 2a and 2b (Appendix A) show the location of the Subject Right-of-Way on aerial photographs.

The project began as a City of Houston Project, (TIRZ17). Aviles Engineering Corporation (AEC) performed a Phase I Environmental Site Assessment (ESA-I) of the Subject Right-of-Way (AEC ESA-I report E102-15 dated October 26, 2015) in which the following recognized environmental conditions (RECs) were identified in connection with the Subject Right-of-Way (Figures 2a and 2b in Appendix A):

- REC #1: Chevron LPST site/Wheatley Investments at 12860 Memorial Drive
- REC #2: The contaminant plume associated with leaks from Your Valet Cleaners at 614 West Bough Lane and A-1 Cleaners LPST and VCP site at 12754 Memorial Drive
- REC #3: Sprint PCS Tower IOP site at 608 West Bough Lane
- REC #4: Mobil gas station at 12802 Memorial Drive
- REC #5: The contaminant plume associated with Conoco 43059 at 12699 Memorial Drive LPST site
- REC #6: Alexan Memorial Bend Apartments IOP site at 12667 Memorial Drive
- REC #7: The contaminant plume associated with the MW Cleaners/Lantern Lane Shopping Center-Pro Cleaners VCP and IHWCA site at 12534 Memorial Drive and the Memorial Green VCP site at 12601 Memorial Drive.

The ESA-I recommended that a Limited Phase II Environmental Site Assessment (ESA-II) be conducted with the installation of soil borings and temporary groundwater sampling wells approximately every 100 feet in the Subject Right-of-Way adjacent to or near each REC.

During a meeting on February 16, 2017 between the City of Houston, Public Works, Geo-Environmental (COH); Lockwood, Andrews, & Newnam, Inc. (LAN); and AEC personnel, the COH determined that RECs #2, #3, #4, and #7 should be considered as potentially petroleum contaminated areas (PPCAs) without any further drilling or sampling since the ESA-I revealed that contamination had crossed Memorial Drive and into the area south of Memorial Drive. COH personnel also indicated that if there was evidence of contamination under Memorial Drive at REC #5, that it also should be considered a PPCA without additional drilling or sampling. After the meeting, AEC reviewed the ESA-I and determined that there were monitor wells located on the eastern side of Memorial Drive at REC #5, therefore REC #5 was identified as a PPCA without additional drilling or sampling.

The COH approved AEC proposal E16-06-03R dated February 21, 2017 for a Limited ESA-II to drill three soil borings and convert one to a temporary monitor well at each of RECs #1 and #6 (Figures 2a and 2b in Attachment A).

The Limited ESA-II was completed and summarized in a report dated May 24, 2018 (AEC ESA-II report E101-17). Groundwater contaminated with benzene, toluene, m- & p- xylenes, total xylenes, and methyl tertiary butyl ether (MTBE) was encountered in the temporary monitoring well at B-2 of REC #1. Petroleum product odor was also detected in the soil of boring B-2 from 26 to 28 feet below grade surface (bgs). Therefore, REC #1 was designated as PPCA #1. Concentrations of contaminants analyzed in soil and groundwater samples from REC #6 were below laboratory detection limits and therefore was not designated as a PPCA. The PPCAs identified by the COH prior to the ESA-II and by AEC during the ESA-II are shown in Figures 3a and 3b (Appendix A) and include:

- PPCA #1: Chevron LPST site/Wheatley Investments at 12860 Memorial Drive
- PPCA #2: The contaminant plume associated with leaks from Your Valet Cleaners at 614 West Bough Lane and A-1 Cleaners LPST and VCP site at 12754 Memorial Drive
- PPCA #3: Sprint PCS Tower IOP site at 608 West Bough Lane
- PPCA #4: Mobil gas station at 12802 Memorial Drive
- PPCA #5: The contaminant plume associated with Conoco 43059 LPST site at 12699 Memorial Drive.
- PPCA #6: The contaminant plume associated with the MW Cleaners/Lantern Lane Shopping Center-Pro Cleaners VCP and IHWCA site at 12534 Memorial Drive and the Memorial Green VCP site at 12601 Memorial Drive.

After TxDOT became involved, a meeting between LAN, TxDOT, and AEC personnel was held on April 2, 2019 to discuss the Memorial Drive reconstruction project. It was determined that the PPCAs as defined in the 2017 Limited ESA-II were inadequate to predict the amount of contaminated soil and groundwater which might be encountered during construction activities and to calculate the associated construction costs of excavating, removal, handling, and disposing of impacted soil and groundwater. An Additional ESA-II was recommended to further delineate the extent of PPCAs #2, #3, #4, #5, and #6 (refer to Figures 3a and 3b in Appendix A).

This report summarizes the activities and presents the results of the Additional ESA-II and also includes information from the 2017 Limited ESA-II in order to update the environmental assessment of the Subject Right-of-Way.

2.2 Authorization

AEC submitted a proposal to LAN on April 11, 2019 for an Additional ESA-II for the Subject Right-of-Way. LAN authorized the Additional ESA-II of the Subject Right-of-Way in an email dated April 30, 2019.

3.0 ON-SITE INVESTIGATION

AEC has performed this Additional ESA-II investigation of the Subject Right-of-Way in general accordance with ASTM Standard Practice E1903-11 and Chapter 11 – Geotechnical and Environmental Requirements of the City of Houston Department of Public Works and Engineering Infrastructure Design Manual (July 1, 2018) to be consistent with the previously performed Limited ESA-II.

A total of 25 boring locations (B-7 through B-31) were marked in the field prior to drilling (Borings B-1 through B-6 were drilled during the Limited ESA-II in 2017.). The soil borings were located approximately 70 to 130 feet apart from each other adjacent to or near Potentially Petroleum Contaminated Areas #2 through #6 (PPCA; COH term which includes both petroleum product and hazardous material contamination). Each soil boring was placed in the best practicable location, considering the location of utilities and other site-specific conditions (e.g. a bridge location). Figures 3a and 3b in Appendix A shows the locations of the soil borings drilled in 2017 and 2019. City of Houston maps were reviewed to determine the location of water and sewer utilities and the Texas811 utility locate service was contacted prior to drilling to mark other subsurface utilities in the Subject Right-of-Way.

The pavement at each of the 25 boring locations was cored on May 23, 2019. The pavement at each boring location was asphalt ranging in thickness from 3.5 inches in B-18 to 14 inches at B-30. Boring B-23 had 6 inches of concrete beneath the asphalt. Borings B-15, B-23, B-30, and B-31 had no base material beneath the pavement. In the remaining boring locations, base material thickness was from 3 inches at boring B-29 to 9 inches at boring B-28. The base material was primarily stabilized shell or stabilized crushed limestone. During the 2017 drilling, the pavement at borings B-1 and B-2 consisted of concrete (thickness ranging from 8.5 to 10 inches) over base (type not indicated; thickness ranging from 15 to 25.5 inches). Borings B-3 through B-6 had asphalt pavement (between 4.75 and 11 inches thick) over unidentified base material (between 3 and 25.25 inches thick). Attached Table 1 in Appendix A summarizes the pavement and base thicknesses. The measurements are also on the boring logs in Appendix C.

On May 29 and 30; and June 3, 4, and 6, 2019, a continuous direct-push soil boring machine was used to obtain a soil core to the total depth at each boring location (Photographs 1 through 6 in Appendix B). Each boring was drilled to 5 feet below the excavation depth of the deepest proposed utility near each location as determined from LAN-provided plans and profiles. The borings were drilled to depths ranging from 12 to 26 feet below grade (top of pavement) surface (bgs). The 2017 soil borings (B-1 through B-6) had been drilled to depths of 20 to 28 feet bgs. The total depth of each soil boring is listed in Table 1 of Appendix A of this report.

Soil cores were collected in 5-foot long acetate liners within the 2-inch diameter direct push corer along the entire length of each boring (Photograph 7 in Appendix B). The majority of the soils encountered during drilling in the Additional and Limited ESA-IIs were sandy clay (refer to the soil boring logs in Appendix C and summary of the borings in Table 1 in Appendix A). Sand and/or silt layers, seams, partings and/or pockets were observed in the soils of each of the borings. A gravel seam was encountered in 2017 in B-1.

A representative section of soil was cut from each 1-foot section of each 5-foot core (when available) and placed in a zip-lock type sandwich bag and set aside for head-space evaluation of volatile organic compound vapors. The remainder of each 1-foot section of each 5-foot soil core was placed in a zip-lock bag in a cooler with ice for possible laboratory analysis. After drilling of the boring was completed, the headspace concentration of volatile organic vapors from each bagged section of soil not in the cooler was analyzed by inserting the probe tip of a calibrated photoionization detector (PID) into a narrow opening of the bag seal (Photograph 8 in Appendix B).

The resulting PID readings are listed on the boring logs in Appendix C including those from borings B-1 through B-6 drilled in 2017. The maximum PID reading for each boring is:

- B-1: 0.2 parts per million (ppm) at 14 to 15 feet bgs.
- B-2: 5.8 ppm at 23 to 24 feet bgs.
- B-3: 4.3 ppm at 21 to 22 feet bgs.
- B-4: 0.8 ppm at 25 to 26 feet bgs.
- B-5: 0.0 ppm at 20 to 21 feet bgs.
- B-6: 1.5 ppm at 20 to 21 feet bgs.
- B-7: 2.5 ppm at 1 to 2 feet bgs.
- B-8: 2.5 ppm at 7 to 8 feet bgs.
- B-9: 1.7 ppm at 8 to 9 and 13 to 14 feet bgs,
- B-10: 3.3 ppm at 6 to 7 feet bgs.
- B-11: 2.5 ppm at 2 to 3, 7 to 8, and 12 to 13 feet bgs.
- B-12: 2.9 ppm at 8 to 9 feet bgs.
- B-13: 3.0 ppm at 7 to 8 feet bgs.
- B-14: 2.4 ppm at 13 to 14 feet bgs.
- B-15: 3.3 ppm at 13 to 14 feet bgs.
- B-16: 2.6 ppm at 16 to 17 feet bgs.
- B-17: 1.5 ppm at 4-5, 5-6, 7-8, and 12 to 14 feet bgs.
- B-18: 1.2 ppm at 16 to 17 and 17 to 18 feet bgs.
- B-19: 2.3 ppm at 13 to 14 feet bgs.
- B-20: 1.5 ppm at 12 to 13 and 17 to 18 feet bgs.
- B-21: 2.2 ppm at 16 to 17 feet bgs.
- B-22: **472 ppm** at 23 to 24 feet bgs (PID reading at 24 to 25 feet bgs is **408 ppm**).
- B-23: **291 ppm** at 23 to 24 feet bgs.
- B-24: 3.2 ppm at 20 to 21 feet bgs.
- B-25: 1.5 ppm at 9 to 10 feet bgs.
- B-26: 0.9 ppm at 17 to 18, 18 to 19, 22 to 23, and 25 to 26 feet bgs.
- B-27: 0.7 ppm at 5 to 6 and 6 to 7 feet bgs.
- B-28: 0.9 ppm at 16 to 17, 17-18, 18-19, 19-20, and 22 to 23 feet bgs.
- B-29: 0.9 ppm at 14 to 15, 16 to 17, and 17 to 18 feet bgs.
- B-30: 1.5 ppm at 18 to 19 feet bgs.
- B-31: 2.2 ppm at 8 to 9 feet bgs.

It should be noted that the PID readings are very high in borings B-22 and B-23.

PID readings of background air (control samples) ranged from 0.0 ppm and 0.6 ppm. PID readings of air in new empty sample bags (control samples) ranged from 0.0 ppm to 1.7 ppm.

The following odors were detected during soil drilling (including 2017 borings):

- B-2: Petroleum product odor in soil from 26 feet to the total depth of 28 feet bgs.
- B-14: Unidentified odor in soil from 17 to 19 feet bgs.
- B-22: **Strong** petroleum product odor in the soil from 17.3 to 20 feet bgs and **very strong** odor from 22.3 feet to the total depth of 26 feet bgs.

- B-23: Slight petroleum product odor in soil from 20 to 22.4 feet bgs and a **very strong** petroleum product odor in soil from 24.4 to the total depth of 26 feet.
- B-24: Petroleum product odor in soil from 16 to 20 feet bgs.
- B-26: Slight unidentified odor in soils from 1.6 to 3.5 and 5 to 15 feet bgs.
- B-27: Slight unidentified odor in soil from 16 to 18.2 feet bgs.
- B-29: Slight unidentified odor in soil from 1 to 8.8 and 16 to 20 feet bgs.
- B-30: Slight unidentified odor in soils from 4 to 10 feet bgs.

A soil sample for laboratory analysis was collected at each boring location from the intervals identified in Table 1 in Appendix A and on the boring logs of Appendix C (borings B-1 through B-6 included). The soil sample was collected from the highest PID reading in each of the borings B-7 through B-31. The same was true for borings, B-1 through B-4 and B-6 previously drilled in 2017. The soil sample was collected in B-5 (drilled 2017) above where groundwater was encountered since all the PID readings in the soils of that boring were 0.0 ppm. Each soil sample was collected and placed in a clean container. Each sample container was labeled with the date and time of sample collection, the soil boring number, and the requested analyses (Photograph 9 in Appendix B). Each of the collected soil samples were preserved on ice and transported to A&B Environmental Services, Inc. commercial analytical laboratory with a completed chain-of-custody form (refer to the analytical laboratory reports including those from B-1 to B-6 collected in 2017 in Appendix D).

Groundwater was not encountered during drilling in borings B-1(2017), B-7, B-8, B-10 through B-12, B-16, B-17, and B-31. No groundwater collected in each of these boreholes after drilling completion. Groundwater was encountered during drilling in borings B-2 (2017), B-4 and B-5 (2017), and B-18 through B-30. Groundwater was encountered during drilling in borings B-6 (2017) and B-9, but no groundwater collected in the completed borehole. There were also damp soils beneath the pavement in B-9. The groundwater appeared to be from a perched groundwater zone of limited extent. Damp soils were encountered during drilling in borings B-13 and B-14, but no groundwater collected in each completed borehole. Damp soil was encountered during drilling in boring B-15, but groundwater collected in the completed borehole. The depth of groundwater could not be determined in B-3 (2017) due to the continual infiltration of water from beneath the pavement into the borehole. The depth groundwater was encountered during drilling and measured at approximately one-quarter to one hour after drilling was completed are shown in Table 1 (Appendix A) and the borings logs (Appendix C). A summary of the presence of groundwater in each boring is as follows:

- B-1: No groundwater encountered during drilling; no groundwater collected in borehole approximately 0.25 hours after drilling completion.
- B-2: Water beneath the base of pavement; groundwater encountered during drilling at 26 feet bgs.
- B-3: Depth of groundwater could not be determined since abundant water trapped under the pavement continued entering the borehole during and after drilling completion.
- B-4: Groundwater encountered at 21.92 feet bgs.
- B-5: Groundwater encountered at 21.25 feet bgs.
- B-6: Groundwater encountered at 21.58 feet bgs, but no groundwater collected in the borehole 0.25 hours after drilling completion.

- B-7: No groundwater encountered during drilling. None collected in the borehole approximately 0.5 hours after drilling completion.
- B-8: No groundwater encountered during drilling. None collected in the borehole approximately 0.5 hours after drilling completion.
- B-9: Soil damp under pavement in upper 2 feet. Groundwater encountered at 15 feet bgs, but did not collect in borehole approximately 0.5 hours after drilling completion.
- B-10: No groundwater encountered during drilling. None collected in the borehole approximately 0.5 hours after drilling completion.
- B-11: No groundwater encountered during drilling. None collected in the borehole approximately 0.5 hours after drilling completion.
- B-12: No groundwater encountered during drilling. None collected in the borehole approximately 1.0 hour after drilling completion.
- B-13: Damp soil from 19.2 feet bgs to total depth of 20 feet bgs; No groundwater collected in borehole approximately 0.5 feet after drilling completion.
- B-14: Damp soil from 18.5 feet bgs to total depth of 19 feet bgs, but no groundwater collected in the borehole approximately 0.25 hours after drilling completion.
- B-15: Damp soil from 18.4 feet bgs to total depth of 21 feet bgs. Groundwater collected in borehole approximately 0.25 hours after drilling completion.
- B-16: No groundwater encountered during drilling. None collected in the borehole approximately 0.5 hours after drilling completion.
- B-17: No groundwater encountered during drilling. None collected in the borehole approximately 0.25 hours after drilling completion.
- B-18: Groundwater encountered during drilling at 14.3 feet bgs.
- B-19: Groundwater encountered during drilling at 17.3 feet bgs.
- B-20: Groundwater encountered during drilling at 18.4 feet bgs; damp soil from 17 to 18.4 feet bgs.
- B-21: Groundwater encountered during drilling at 17.8 feet bgs.
- B-22: Groundwater encountered during drilling at 17.3 feet bgs.
- B-23: Groundwater encountered during drilling at 22.4 feet bgs.
- B-24: Groundwater encountered during drilling at 21 feet bgs.
- B-25: Groundwater encountered during drilling at 18.5 feet bgs.
- B-26: Groundwater encountered during drilling at 25 feet bgs; damp soil from 7.7 to 25 feet bgs.
- B-27: Groundwater encountered during drilling at 18.2 feet bgs.
- B-28: Groundwater encountered during drilling at 20.3 feet bgs; damp soil from the lower portion of the 12.3 to 15 feet bgs interval and 18 to 20.3 feet bgs.
- B-29: Water beneath pavement; groundwater encountered during drilling at 22.6 feet bgs.
- B-30: Groundwater encountered during drilling at 6.2 to 6.4, 10 to 11.8, and 24.1 feet bgs. Damp soil encountered from 16.3 to 16.8 feet bgs.
- B-31: No groundwater encountered during drilling. None collected in the borehole approximately 0.25 hours after drilling completion.

A petroleum product odor was detected in the groundwater of borings B-22, B-23, and B-24. No petroleum product sheens were observed on the groundwater.

Each of the 25 soil borings of the Additional ESA-II were converted to a temporary monitoring well which consisted of new 1-inch diameter polyvinyl chloride (PVC) screen and new 1-inch diameter PVC solid-wall casing (Photograph 10 in Appendix B; temporary monitoring wells were only installed in borings B-2 and B-5 of the six borings drilled in 2017). The length of screen and solid wall casing used in each temporary monitor well are identified at the bottom of each of the boring logs in Appendix C. Once installed, each temporary monitoring well that contained groundwater was developed by removing groundwater from the well. A groundwater sample was collected from each temporary monitoring well containing groundwater. The collected groundwater sample was placed into clean, laboratory-provided sample containers, labeled with the date and time of sample collection, the well number, the requested analyses, and the initials of the sample collector (Photograph 11 in Appendix B). Each container containing groundwater was preserved on ice in a cooler and transported to A&B Environmental Services, Inc. in Houston, Texas with a completed chain-of-custody form (refer to the analytical laboratory reports, including those for 2017, in Appendix E).

Following drilling and sampling, each of the 25 borings was grouted from the total depth to up to the bottom of the pavement base material and then patched with asphalt (refer to Photograph 12 in Appendix B). The 2017 borings were grouted from the total depth up to approximately 1 foot below the pavement surface. The approximate upper foot of borings B-1 and B-2 was patched with concrete. The approximate upper foot of B-3 through B-6 was patched with asphalt. Prior to plugging, the temporary monitoring wells were removed from their boreholes.

4.0 LABORATORY ANALYSES

Each of the 25 soil and 16 groundwater samples collected during the Additional ESA-II were analyzed by A&B Environmental Services, Inc. laboratory. Laboratory analysis included:

- Benzene, toluene, ethylbenzene, and xylenes (BTEX); and methyl tertiary butyl ether (MTBE) using analytical method SW-846 8260C for soil samples from soil borings B-19 through 24; and the groundwater samples from borings B-19 through B-24 (The 2017 soil samples from borings B-1 through B-3 and the groundwater sample from B-2 were also analyzed for the same compounds using the same analytical method).
- Volatile organic compounds (VOCs) using analytical method SW-846 8260C for soil samples from soil borings B-7 through 18 and B-25 through B-31and the groundwater samples from borings B-15, B-18, and B-25 through B-30 (The same analytical method was used for the 2017 soil samples from borings B-4 through B-6 and the groundwater sample from boring B-5.).
- Total petroleum hydrocarbons (TPH) using analytical method Texas Commission on Environmental Quality (TCEQ) Texas Method 1005 (TX 1005) for each soil and groundwater sample (including the 2017 samples).
- The % moisture content of each of the soil samples was also determined as required by the laboratory for the above analyses.

The results of the BTEX, MTBE, and TPH soil sample analyses for borings B-1 through B-3 (2017 borings) and B-19 through B-24 are summarized in Table 2 in Appendix D. Appendix E contains the laboratory analysis reports, quality control certificates, and chains-of-custody. As shown in Table 2, the following samples contained compound concentrations which exceeded their respective laboratory detection limits:

- B-22, 23 to 24 feet bgs: ethylbenzene (**0.00763** milligrams per Kilogram (mg/Kg)), m- & p-xlenes (**0.00655** mg/Kg), total xylenes (**0.00655** mg/Kg), TPH C6-C12 fractions (**42.5** mg/Kg), and TPH C6-C35 fractions (**42.5** mg/Kg).
- B-23, 23 to 24 feet bgs: toluene (**2.39** mg/Kg), ethylbenzene (**46.0** mg/Kg), m- & p-xlenes (**123** mg/Kg), o-xlenes (**14.4** mg/Kg), total xylenes (**137.4** mg/Kg), TPH C6-C12 fractions (**490** mg/Kg), and TPH C6-C35 fractions (**490** mg/Kg).

Each of the remaining concentrations of the soil samples in Table 2 is below its respective laboratory detection limit.

The results of the VOCs and TPH soil sample analyses for borings B-4 through B-6 (2017 borings) and B-7 through B-18 and B-25 through B-31 are summarized in Table 3 in Appendix D. Appendix E contains the laboratory analysis reports, quality control certificates, and chains-of-custody. As shown in Table 3, the following samples contained compound concentrations which exceeded their respective laboratory detection limits:

- B-30, 18 to 19 feet bgs: cis-1, 2-dichloroethylene (**0.00585** mg/Kg).

Each of the remaining concentrations of the soil samples in Table 3 is below its respective laboratory detection limit. The soil sample from 6 to 7 feet bgs of B-31 was inadvertently analyzed after holding times had expired. This however does not have much impact on the delineation of the extent of the contamination in the area (refer to PPCA #6 in Section 7.0 for further details).

The results of the BTEX, MTBE, and TPH groundwater sample analyses for boring B-2 (2017 borings), and B-19 through B-24 are summarized in Table 4 in Appendix D. Appendix E contains the laboratory analysis reports, quality control certificates, and chains-of-custody. As shown in Table 4, the following samples contained compound concentrations which exceeded their respective laboratory detection limits:

- B-2 (2007): benzene (**0.277** milligrams per Liter (mg/L)), toluene (**0.014** mg/L), m- & p-xlenes (**0.015** mg/L), total xylenes (**0.015** mg/L), and MTBE (**0.025** mg/L).
- B-22: benzene (**0.0440** mg/L), toluene (**0.00820** mg/L), ethylbenzene (**0.269** mg/L), m- & p-xlenes (**0.300** mg/L), o-xlenes (**0.00532** mg/L), total xylenes (**0.30532** mg/L), TPH C6-C12 fractions (**2.36** mg/L), and TPH C6-C35 fractions (**2.36** mg/L).
- B-23: benzene (**0.0342** mg/L), toluene (**0.714** mg/L), ethylbenzene (**0.762** mg/L), m- & p-xlenes (**2.84** mg/L), o-xlenes (**1.12** mg/L), total xylenes (**3.96** mg/L), TPH C6-C12 fractions (**7.01** mg/L), and TPH C6-C35 fractions (**7.01** mg/L).

Each of the remaining concentrations of the groundwater samples in Table 4 is below its respective laboratory detection limit.

The results of the VOCs and TPH groundwater sample analyses for borings B-5 (2017 boring), B-15, B-18, B-25 through B-30 are summarized in Table 5 in Appendix D. Appendix E contains the laboratory analysis reports, quality control certificates, and chains-of-custody. As shown in Table 5, each of the VOCs and TPH concentrations in each of the groundwater samples is below its respective laboratory detection limit.

5.0 WASTE DISPOSAL

Waste soil and wastewater generated during the additional ESA-II drilling were placed in 5-gallon plastic buckets and capped with a lid manufactured to fit the container. Each bucket of waste was transported to and stored at AEC's property at 5790 Windfern in Houston. Waste soil

and wastewater disposal is in progress at the time of report preparation. Once the waste soil and wastewater are disposed, a copy of the waste manifest will be submitted. Waste soil generated from borings B-1 and B-3 through B-6 during the 2007 ESA-II was disposed of as solid waste since none of the laboratory concentrations of constituents in the soil exceeded their applicable Texas Commission on Environmental Quality Texas Risk Reduction Program Protective Concentration Levels. Waste soil from boring B-2 was disposed of via a waste manifest in a properly licensed facility. A copy of the waste manifest was included in Appendix F of the 2017 ESA-II report.

One 5-gallon bucket of wastewater was generated during the 2007 drilling activities, but its contents leaked from a hole which developed in the bucket. The bucket was located on a concrete surface which slopes to a storm sewer drain. The leaked contents of the bucket would have been confined to the concrete pavement and flowed into the storm drain. The wastewater was a mixture of contaminated and uncontaminated groundwater and decontamination water from the drilling and sampling activities so the contamination in the water would have been highly diluted when entering the storm sewer.

6.0 SUMMARY

AEC performed this TxDOT-requested Additional ESA-II for the potentially petroleum contaminated areas (PPCAs) #2, #3, #4, #5, and #6 that were identified in the 2017 Limited ESA-II. TxDOT determined that the PPCAs as defined in the 2017 ESA-II were inadequate to predict the amount of contaminated soil and groundwater which might be encountered during construction activities and to calculate associated construction costs for excavating,, removal, handling, and disposing of impacted soil and groundwater, since the PPCAs #2 through #6 boundaries had been determined without soil and groundwater sampling as originally instructed by the City of Houston. This 2019 Additional ESA-II was performed in general accordance with ASTM Standard Practice E 1903-11 and Chapter 11- Geotechnical and Environmental Requirements of the City of Houston Department of Public Works and Engineering Infrastructure Design Manual (July 1, 2018). This report summarizes the activities and presents the results of the Additional ESA-II and also includes information from the 2017 Limited ESA-II in order to update the environmental assessment of the Subject Right-of-Way.

During the Additional ESA-II, a total of 25 soil borings (borings B-7 through B-31) were drilled to depths of 12 to 26 feet below grade surface (borings B-1 through B-6 had been drilled to depths of 20 to 28 feet below grade surface during the 2017 Limited ESA-II) and a soil sample was collected from each. The soils encountered during drilling in the Additional ESA-II (as well as the previous Limited ESA-II) were mainly sandy clay. Sand and/or silt layers, seams, partings and/or pockets were observed in the soils of each of the borings (a gravel seam was encountered in 2017 in B-1). Photoionization detector (PID) readings were less than or equal to 5.8 parts per million (ppm) in each of the soil intervals measured from soil cores from boring locations B-1 through B-31 except for at borings B-22 and B-23 which had PIDs as high as 472 and 291 ppm, respectively. Petroleum product odors of varying intensities were detected in some of the soils at boring B-2 (2017), B-22, B-23, and B-24 (near areas of former or existing gasoline stations). Some of the odors in B-22 and B-23 were very strong. An unidentified odor was detected in some of the soils from boring B-14, B-26, B-27, B-29, and B-30 (near existing dry cleaner and voluntary cleanup program, VCP, sites). Soil samples collected from borings B-1 through B-3 (2017) and B-19

through B-24 were analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tertiary butyl ether (MTBE), and total petroleum hydrocarbons (TPH) 1005. Soil samples collected from B-4 (2017) through B-6 (2017), B-7 through B-18, and B-25 through B-31 were each analyzed for volatile organic compounds (VOCs) and TPH 1005. The soil sample from B-31 was inadvertently analyzed after its holding time had expired, however this does not have much impact on the conclusions as explained later. The laboratory analysis results of the soil samples showed that the concentrations of ethylbenzene, m- & p-xylenes, total xylenes, and TPH C6-C12 and C6-C35 fractions at boring B-22, 23 to 24 feet below grade surface (bgs); and concentrations of toluene, ethylbenzene, m- & p-xylenes, o-xylenes, total xylenes, and TPH C6-C12 and C6-C35 fractions at B-23, 23 to 24 feet bgs exceeded their respective laboratory detection limits. The concentration of VOC compound cis-1, 2-dichloroethylene in the soil sample from B-30, 18 to 19 feet bgs exceeded its laboratory detection limit. Each of the remaining BTEX, MTBE, TPH 1005, and VOCs concentrations were below laboratory detection limits.

Each of soil borings B-2 (2017), B-5 (2017), and B-7 through B-31 were converted to a temporary monitoring well and a groundwater sample was collected from each that yielded groundwater. Groundwater samples collected from B-2 (2017), and B-19 through B-24 were each analyzed for BTEX, MTBE, and TPH 1005. Each groundwater sample from temporary monitoring wells B-5 (2017), B-7 through B-18 and B-25 through B-31 were analyzed for VOCs and TPH 1005. The laboratory analysis results of the samples showed that concentrations of benzene, toluene, m- & p-xylenes, total xylenes, and MTBE in B-2; benzene, toluene, ethylbenzene, m- & p-xylenes, o-xylenes, total xylenes, and TPH C6-C12 and C6-C35 fractions in B-22; benzene, toluene, ethylbenzene, m- & p-xylenes, o-xylenes, total xylenes, and TPH C6-C12 and C6-C35 fractions in B-23 were above laboratory detection limits. Each of the remaining BTEX, MTBE, TPH 1005, and all of the VOCs concentrations were below laboratory detection limits.

Disposal of the waste soil and wastewater generated during the Additional ESA-II is in progress at the time of report preparation. Waste soil from boring B-2 of the 2017 Limited ESA-II was disposed via a waste manifest in a properly licensed facility and the manifest was attached in the 2017 report. The remaining 2017 soil was disposed of as solid waste. One 5-gallon bucket of wastewater was generated during the 2017 drilling activities, but its contents leaked from a hole which developed in the bucket. The bucket was located on a concrete surface which slopes to a storm sewer drain, therefore the leaked contents of the bucket would have been confined to the concrete pavement and flowed into the storm drain. The wastewater was a mixture of contaminated and uncontaminated groundwater and decontamination water from the drilling and sampling activities so the contamination in the water would have been highly diluted when entering the storm sewer.

7.0 CONCLUSION AND RECOMMENDATIONS

Based on the guidelines provided by the City of Houston (the originator of the project), the results of the AEC ESA-I report dated March 25, 2015, the results of the 2017 Limited ESA-II, and the results of this Additional ESA-II, AEC has revised the extent of the potentially petroleum contaminated areas (PPCAs) along the Subject Right-of-Way identified in the 2017 Limited ESA-II. Figures 3a and 3b in Appendix A show the approximate extents of the PPCAs in the 2017 Limited ESA-II. Figures 4a and 4b in Appendix A shows the approximate extents of the

revised PPCAs. Figures 5 through 19 in Appendix A shows the revised extents of the PPCAs plotted in more detail on the latest plans and profiles provided to AEC by LAN. The boundaries of each PPCA are the first “clean” (laboratory results are below laboratory detection limits and no odors were detected in either soil or groundwater) boring location beyond the impacted soil and/or groundwater or the Subject Right-of-Way boundaries. The following is a summary of the revised PPCAs.

- **PPCA #1:** This PPCA was determined in the 2017 Limited ESA-II and extends from Station 1+95.3 to Station 3+63.7 (Figures 4a and 4b, 5 and 6 in Appendix A). Benzene, toluene, m- & p-xylenes, and methyl tertiary butyl ether contamination were detected in the groundwater and a petroleum product odor was noted in the soil of boring B-2 from 26 to 28 feet bgs near the Chevron Station at 12860 Memorial Drive. The laboratory analysis of the soil sample collected at the highest PID reading (as is standard practice) from boring B-2 did not exhibit any contaminant concentrations above laboratory detection limits, however, the highest PID measured was not at the location of the petroleum product odor. Therefore, something else (e.g. organic matter in the soil or instrument electronic drift) caused the highest PID reading. Due to the petroleum product odor in the soil, the entire soil column in the PPCA should be assumed to be contaminated in addition to the groundwater unless proven otherwise during construction activities.
- **PPCAs #2, #3, and #4:** These three PPCAs are adjacent to each other and the exact boundaries between each cannot be readily determined, and therefore are grouped together. The releases comprising these PPCAs were from dry cleaners and a former gasoline station. Soil borings/temporary monitoring wells B-7 through B-18 were drilled/installed during the Additional ESA-II. The extent of the PPCAs in the 2017 Limited ESA-II extended from Station 7+37.3 to Station 17+74.6 on the project plans and profiles (approximate extent shown on Figures 3a and 3b in Appendix A). The revised extent of the PPCAs is from Station 13+93.8 to Station 15+22.6 along Memorial Drive and from the end of the Subject Right-of-Way on West Bough Lane to the end of the Subject Right-of Way on Broken Bough Drive (Figures 4a and 4b, 7, 8, and 9 in Appendix A; No station numbers are shown on the plans and profiles provided for the project on Broken Bough Drive and West Bough Lane.). VOCs and TPH concentrations in each of the soil and groundwater samples collected were below laboratory detection limits. However, an unidentified odor was detected in the soils from 17 to 18 and 18.5 to 19 feet bgs at boring B-14 right above and associated with some damp soil. As in PPCA #1, the soil sample collected from the highest PID did not exhibit any odor and therefore the sample collected may have missed the contamination. Therefore as a precaution, the soil from the base of the pavement to 5 feet below the deepest proposed utility in revised PPCAs #2, 3, and 4 (Figures 4a and 4b, 7, 8, and 9 in Appendix A) should be considered as contaminated. None of the groundwater samples collected during the Additional ESA-II exhibited any VOCs or TPH concentrations above laboratory detection limits. However, it should be noted that groundwater samples could only be collected from the temporary monitoring wells at borings B-15 at the border of the revised PPCAs and B-18 outside the revised PPCAs but inside the original PPCAs boundary, since these were the only wells to collect water; all the other temporary monitoring wells were dry one-quarter to one hour after drilling was completed. Groundwater was encountered during drilling at B-9, but no water collected in the completed boring or installed temporary monitoring

well. Damp soils were observed at borings B-13 at the edge revised PPCA and B-14 in the revised PPCA, but no water collected in the completed borings or installed temporary monitoring wells. It should be noted that soils in B-13 and B-14 in the revised PPCAs, and other dry borings (B-7, B-8, B-10 through B-12, B-16 and B-17) outside the revised PPCAs, but within the original PPCA could have yielded groundwater if left open for a longer period of time. Therefore during construction, groundwater could collect in these areas in trenches and auger boreholes installed and drilled during construction activities. Or some of these boring locations could yield groundwater during construction activities if the utilities are placed deeper than that shown on the plans and profiles given to AEC by LAN. If groundwater collects in a construction trench or auger borehole in the revised PPCAs, it should be considered as contaminated. If groundwater collects in any construction trench or auger borehole in areas outside the revised PPCAs, then that groundwater should be consider as contaminated, unless proven otherwise and the extent of the revised PPCAs enlarged. The vertical extent of the revised PPCAs extends from below the pavement to 5 feet below the deepest utility to be installed during construction activities in these revised PPCAs.

- **PPCA #5:** This PPCA is associated with a gasoline leak from a former Conoco station at 12699 Memorial Drive. Soil borings/temporary monitoring wells B-19 through B-24 were drilled/installed during the Additional ESA-II. The extent of the PPCA in the 2017 Limited ESA-II extended from Station 27+06.2 to Station 31+60.6 on the project plans and profiles (approximate extent shown on Figures 3a and 3b in Appendix A). The revised extent of the PPCA is from Station 28+22.5 to Station 33+09.5 along Memorial Drive and to the end of the Subject Right-of-Way on Boheme Drive (no station numbers given on plans and profiles for Boheme Drive; Figures 4a and 4b, 10 through 15 in Appendix A). Ethylbenzene, m- & p-xlenes, total xylenes, and TPH (C6-C12 and C6-C35 fractions) concentrations exceeded laboratory detection limits in the soil sample from B-22 and toluene, ethylbenzene, m- & p-xlenes, o-xlenes, total xylenes, and TPH (C6-C12 and C6-C35 fractions) concentrations exceeded laboratory detection limits in the soil sample from B-23. Very high PID readings and slight to very strong petroleum product odors were detected in some of the soils from B-22 and B-23 and a petroleum product odor was detected in some of the soils in B-24 (Lab results were nondetected which is believed to be because the soil sample was collected at the highest PID reading which was not where the odors were detected). Benzene, toluene, ethylbenzene, m- & p-xlenes, total xylenes, and TPH (C6-C12 and C6-C35 fractions) concentrations exceeded laboratory detection limits in the groundwater sample from B-22 and benzene, toluene, ethylbenzene, m- & p-xlenes, o-xlenes, total xylenes, and TPH (C6-C12 and C6-C35 fractions) concentrations exceeded laboratory detection limits in the groundwater sample from B-23. In addition, a petroleum product odor was detected in the groundwater sample of B-22, B-23, and B-24. The vertical extent of the revised PPCA extends from below the pavement to 5 feet below the deepest utility to be installed during construction activities in the revised PPCA.
- **PPCA #6:** This PPCA is associated with a dry cleaner leak from MW Cleaners/Pro Cleaners at 12534 Memorial Drive and a VCP site at 12601 Memorial Drive. Soil borings/temporary monitoring wells B-25 through B-31 were drilled/installed during the Additional ESA-II. The extent of the 2017 PPCA was from Station 42+40.4 to Station 49+72.8 (the eastern end of the Subject Right-of-Way) along Memorial Drive

(approximate extent shown on Figures 3a and 3b in Appendix A). The revised extent of the PPCA is from Station 42+21.5 to Station 49+72.8 (the eastern end of the Subject Right-of-Way) along Memorial Drive and to the edge of the Subject Right-of-Way on Sommerset Place, Legend Lane, Tallowood Road and the driveway entrance due south of Tallowood Drive (no station numbers given on plans and profiles for Sommerset Place, Legend Lane, Tallowood Road and the driveway entrance due south of Tallowood Road; Figures 4a and 4b, 16 through 19 in Appendix A). A slight undetermined odor was detected in some of the soils from B-26, B-27, B-29, and B-30. The VOC compound cis-1, 2-dichloroethylene was detected above laboratory detection limits in the soil sample from boring B-30. The soil sample (no groundwater encountered) from boring B-31 was inadvertently analyzed after holding times had expired, however this does not have much impact on the extent of the revised PPCA. The soil in boring B-30 was contaminated with a VOC. If the soil sample from B-31 had been analyzed within its holding time and all concentrations were below laboratory detection limits, the B-31 would have been the eastern extent of the revised PPCA. If concentrations of the sample were above laboratory detection limits, then the eastern extent of the revised PPCA would have been the eastern end of the Subject Right-of-Way. According to the plans and profiles received there is only approximately 14 feet difference between the two different boundaries. Given this situation, AEC has placed the edge of the revised PPCA at the more conservative eastern end of the Subject Right-of-Way. The VOCs and TPH concentrations in the groundwater samples collected from each temporary monitoring well installed were below their respective laboratory detection limits. No odors were detected in the groundwater. The vertical extent of the revised PPCA is the soil from beneath the pavement to 5 feet below the deepest utility to be installed at the revised PPCA. Based on the laboratory analyses results, the groundwater does not appear to be contaminated to the depths the borings were drilled to (5 feet below the deepest nearest proposed utility). Contamination from dry cleaners is denser than water and sinks deeper with time, therefore, AEC believes that groundwater deeper than the proposed deepest utility may be contaminated. If during construction, the utilities are set at a depth deeper than drilled during the additional ESA-II, then the groundwater encountered should be considered as contaminated unless proven otherwise during construction activities.

For this construction project, the contractor should follow the Texas Department of Transportation (TxDOT) Specifications for 1) safety (workers and public), 2) selections of proper pipes and gaskets, and 3) legal disposal of the wastes generated.

8.0 LIMITATIONS

The information and conclusions provided in this report are based on a general knowledge of the Subject Right-of-Way; information provided to AEC about this project and the results of the ESA-I (2015); Limited ESA-II assessment performed in 2017; and the Additional ESA-II assessment performed in 2019. This report documents the concentrations of petroleum products and hazardous substances detected in the respective soil and groundwater samples collected and analyzed during the ESA-II assessments. AEC cannot guarantee that not finding evidence of contamination means that contamination does not exist within the Subject Right-of-Way. There is a possibility that contaminated soil and groundwater may exist in the Subject Right-of-Way that were not detected during the limited ESA-II investigation due to the limited number and

location of the soil borings and temporary monitoring wells, samples collected, contaminants analyzed, how long the borings remained open and the temporary monitoring wells remained in place, and the cost and time constraints of the project. As a result, the goal of this investigation is to reduce, but not eliminate uncertainty regarding the presence of petroleum product and hazardous substance contamination in the Subject Right-of-Way.

This investigation was performed using the standard level of care and diligence normally practiced by recognized professional environmental and engineering firms in this area, presently performing similar services under similar circumstances.

This report has been prepared specifically to investigate and assess if petroleum products or hazardous substances present in RECs are also present in the Subject Right-of-Way. The conclusions presented in this report should not be relied upon for other sites without additional evaluation and/or investigation. This document is not intended to constitute or substitute for legal counsel or guidance in connection with contamination in the Subject Right-of-Way, nor does it constitute a toxicological report on health effects from potential exposure to contamination during construction in the Subject Right-of-Way.

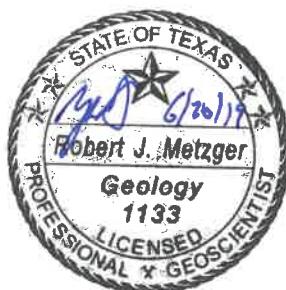

9.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

Robert J. Metzger, CAPM, P.G., AEC Senior Geologist, conducted the additional and limited ESA-II assessments in general accordance with in general accordance with ASTM Standard Practice E1903 and Chapter 11 – Geotechnical and Environmental Requirements of the COH Department of Public Works and Engineering Design Manual (07-01-2016) for the 2017 Limited ESA-II and the COH Department of Public Works and Engineering Infrastructure Design Manual (07-01-2018) for this 2019 report. He has conducted ESA-IIs for numerous City of Houston Department of Public Works and Engineering and other engineering projects. His qualifications are further described in his resume in Appendix F.

Prepared by:

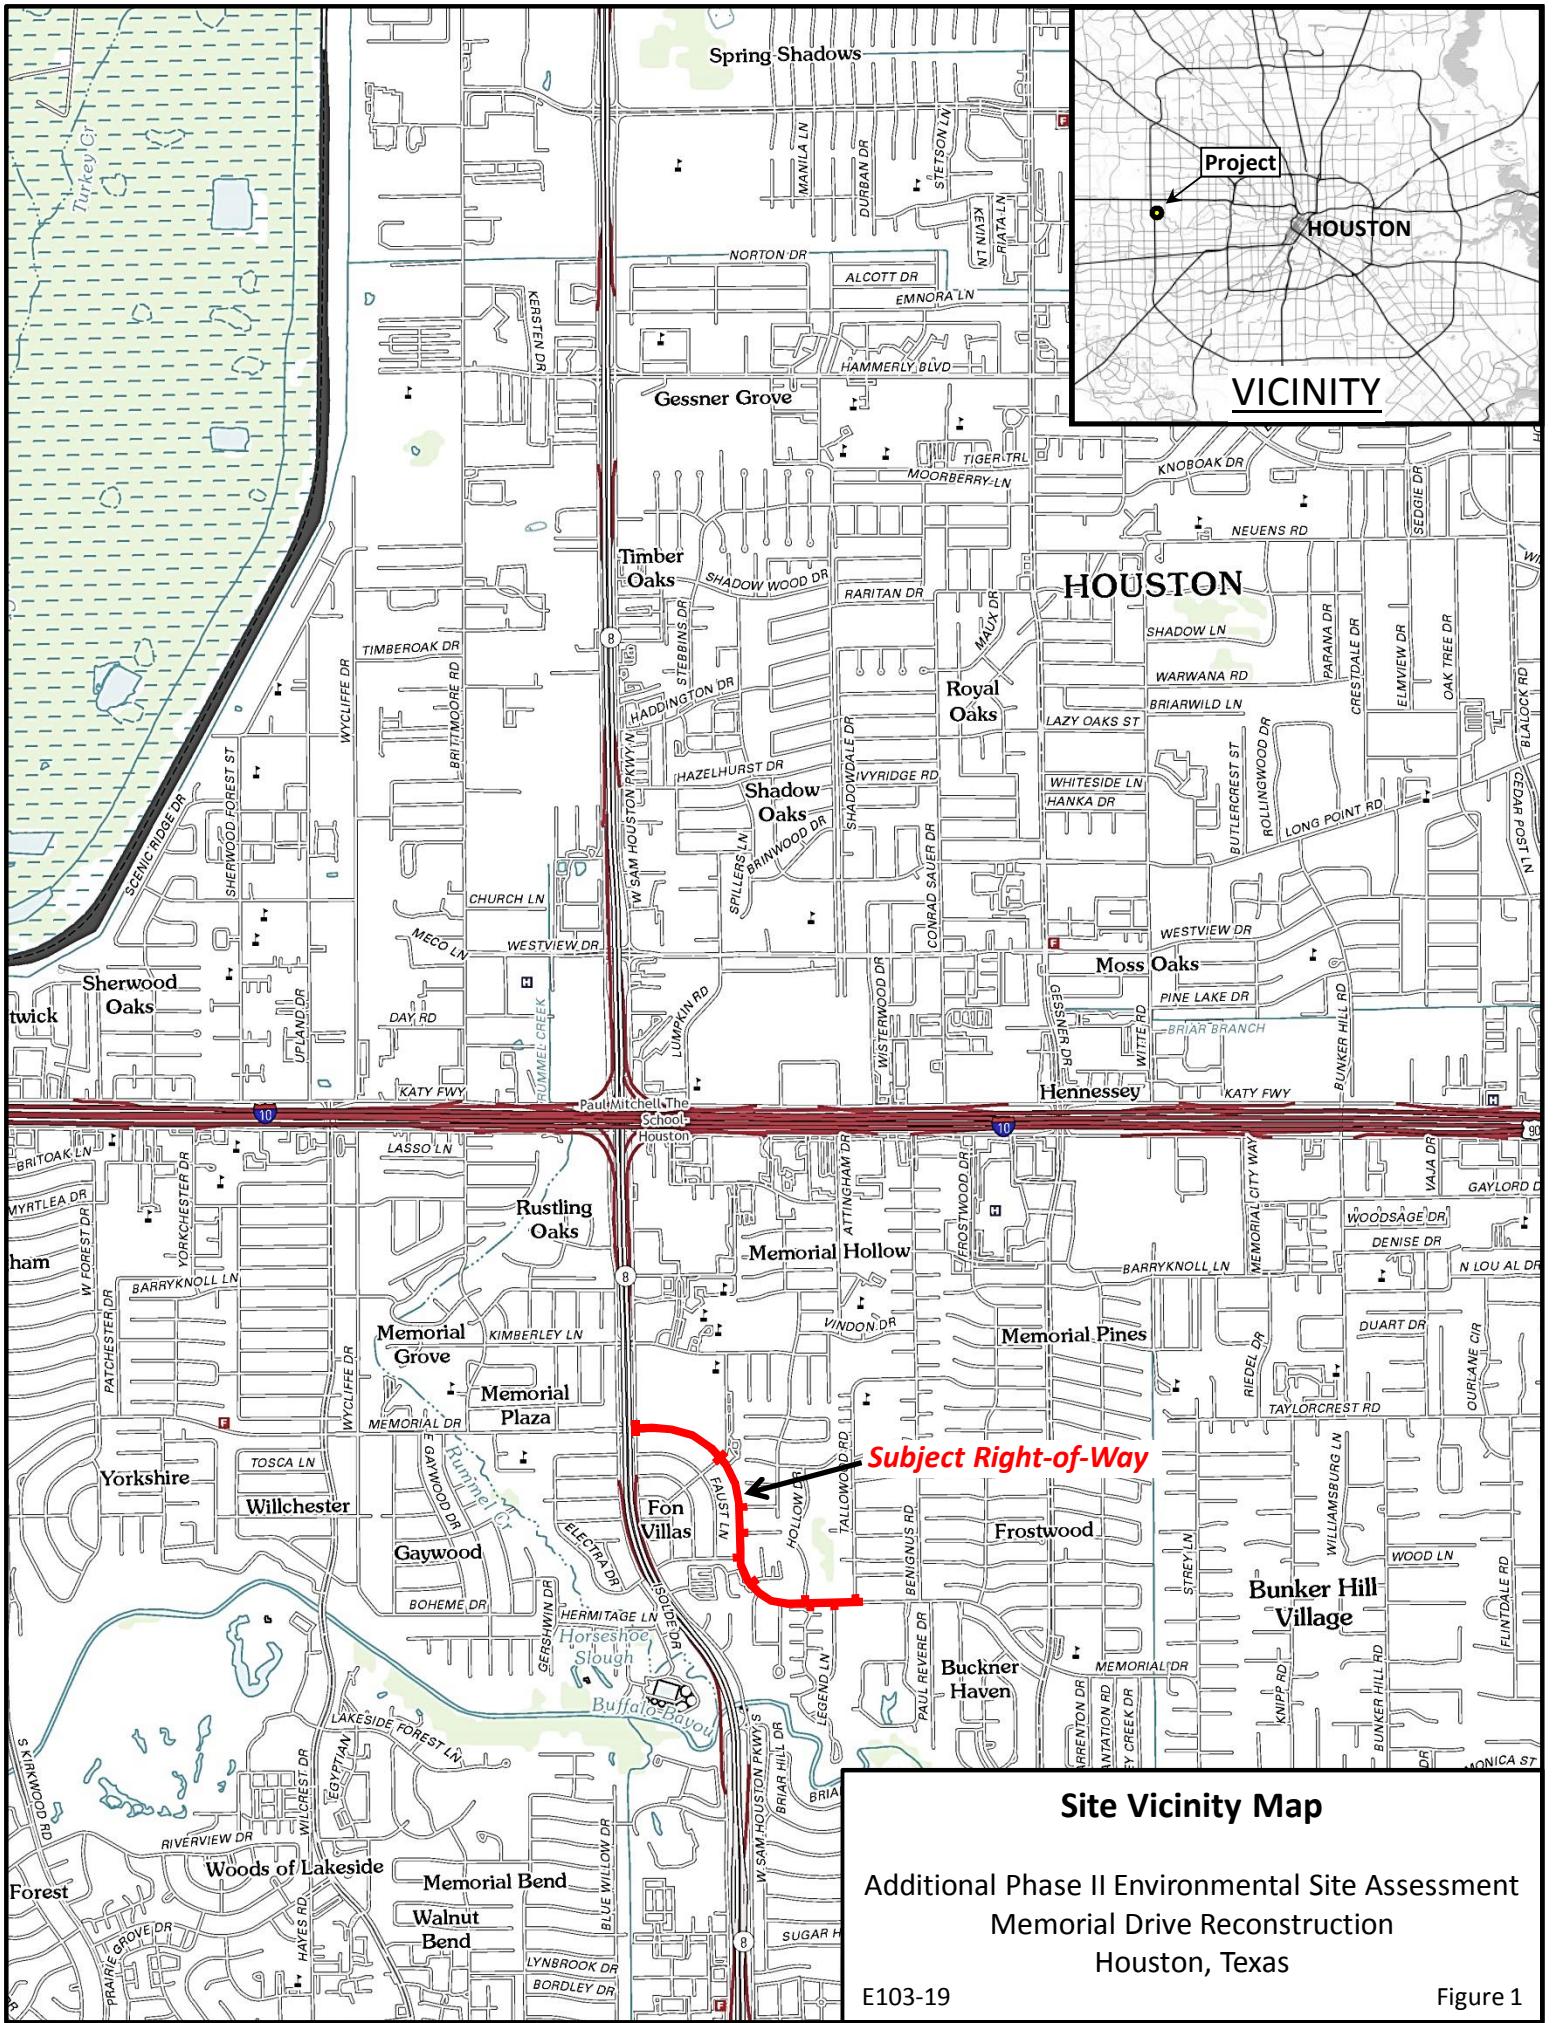

Robert J. Metzger, CAPM, P.G.

¹bgs = below grade surface.

²mg/L = milligrams per Liter.

³B-5 = Temporary monitoring well was installed at B-5 on May 26, 2017

⁴U = Undetected at laboratory detection limit shown.

⁵NR = Not recorded in laboratory report.

⁶Dry = Groundwater was not encountered during drilling; soil was damp at 18.29; water collected in temporary monitoring well.

**Limited Phase II Environmental Site Assessment
Memorial Drive Reconstruction, Houston, Texas**

APPENDIX E

**ANALYTICAL LABORATORY REPORTS AND QUALITY ASSURANCE AND
QUALITY CONTROL DOCUMENTATION**

Laboratory Analysis Report

Total Number of Pages: 34

Job ID : 17051752

10100 East Freeway, Suite 100, Houston, TX 77029 tel: 713-453-6060, fax: 713-453-6091, http://www.ablabs.com

Client Project Name :
Memorial Reconstruction, Houston

Report To : Client Name: Aviles Engineering P.O.#.:
Attn: Robert J. Metzger Sample Collected By: Robert J. Metzger
Client Address: 5790 Windfern Date Collected: 05/25/17
City, State, Zip: Houston, Texas, 77041

A&B Labs has analyzed the following samples...

| Client Sample ID | Matrix | A&B Sample ID |
|------------------|--------|---------------|
| B-1 14-15 | Soil | 17051752.01 |
| B-2 23-24 | Soil | 17051752.02 |
| B-2 Water | Water | 17051752.03 |
| B-3 21-22 | Soil | 17051752.04 |
| B-4 25-26 | Soil | 17051752.05 |

A handwritten signature in black ink that reads "Shantall Carpenter".

Released By: Shantall Carpenter
Title: Senior Project Manager
Date: 6/5/2017

This Laboratory is NELAP (T104704213-17-16) accredited. Effective: 4/1/2017; Expires: 3/31/2018

Scope: Non-Potable Water, Drinking Water, Air, Solid, Biological Tissue, Hazardous Waste

I am the laboratory manager, or his/her designee, and I am responsible for the release of this data package. This laboratory data package has been reviewed and is complete and technically compliant with the requirements of the methods used, except where noted in the attached exception reports. I affirm, to the best of my knowledge that all problems/anomalies observed by this laboratory (and if applicable, any and all laboratories subcontracted through this laboratory) that might affect the quality of the data, have been identified in the Laboratory Review Checklist, and that no information or data have been knowingly withheld that would affect the quality of the data.

This report cannot be reproduced, except in full, without prior written permission of A&B Labs. Results shown relate only to the items tested. Samples are assumed to be in acceptable condition unless otherwise noted. Blank correction is not made unless otherwise noted. Air concentrations reported are based on field sampling information provided by client. Soil samples are reported on a wet weight basis unless otherwise noted. Uncertainty estimates are available on request.

LABORATORY TERM AND QUALIFIER DEFINITION REPORT

Job ID : 17051752

Date: 6/5/2017

General Term Definition

| | | | |
|----------|---|----------|-----------------------------|
| Back-Wt | Back Weight | Post-Wt | Post Weight |
| BRL | Below Reporting Limit | ppm | parts per million |
| cfu | colony-forming units | Pre-Wt | Previous Weight |
| Conc. | Concentration | Q | Qualifier |
| D.F. | Dilution Factor | RegLimit | Regulatory Limit |
| Front-Wt | Front Weight | RPD | Relative Percent Difference |
| LCS | Laboratory Check Standard | RptLimit | Reporting Limit |
| LCSD | Laboratory Check Standard Duplicate | SDL | Sample Detection Limit |
| MS | Matrix Spike | surr | Surrogate |
| MSD | Matrix Spike Duplicate | T | Time |
| MW | Molecular Weight | TNTC | Too numerous to count |
| J | Estimation. Below calibration range but above MDL | | |

Qualifier Definition

| | |
|-----|---|
| J | Estimation. Below calibration range but above MDL. |
| L1 | Associated LCS and/or LCSD recovery is above acceptance limits for flagged analyte. Bias may be high. |
| L2 | Associated LCS and/or LCSD recovery is below acceptance limits for flagged analyte. Bias may be low. |
| M9 | Matrix Spike and/or Matrix Spike Duplicate recovery is below laboratory control limits. |
| R1 | RPD exceeds control limits. |
| S1 | Surrogate recovery is above control limit. Results may be biased high. |
| S2 | Surrogate recovery is below control limit. Results may be biased low. |
| U | Undetected at SDL (Sample Detection Limit). |
| V11 | CCV recovery is below acceptance limits. |

Shantall Carpenter

Released By: Shantall Carpenter
Title: Senior Project Manager
Date: 6/5/2017

This Laboratory is NELAP (T104704213-17-16) accredited. Effective: 4/1/2017; Expires: 3/31/2018

Scope: Non-Potable Water, Drinking Water, Air, Solid, Biological Tissue, Hazardous Waste

I am the laboratory manager, or his/her designee, and I am responsible for the release of this data package. This laboratory data package has been reviewed and is complete and technically compliant with the requirements of the methods used, except where noted in the attached exception reports. I affirm, to the best of my knowledge that all problems/anomalies observed by this laboratory (and if applicable, any and all laboratories subcontracted through this laboratory) that might affect the quality of the data, have been identified in the Laboratory Review Checklist, and that no information or data have been knowingly withheld that would affect the quality of the data.

This report cannot be reproduced, except in full, without prior written permission of A&B Labs. Results shown relate only to the items tested. Samples are assumed to be in acceptable condition unless otherwise noted. Blank correction is not made unless otherwise noted. Air concentrations reported are based on field sampling information provided by client. Soil samples are reported on a wet weight basis unless otherwise noted. Uncertainty estimates are available on request.

LABORATORY TERM AND QUALIFIER DEFINITION REPORT

Job ID : 17051761

Date: 6/5/2017

General Term Definition

| | | | |
|----------|---|----------|-----------------------------|
| Back-Wt | Back Weight | Post-Wt | Post Weight |
| BRL | Below Reporting Limit | ppm | parts per million |
| cfu | colony-forming units | Pre-Wt | Previous Weight |
| Conc. | Concentration | Q | Qualifier |
| D.F. | Dilution Factor | RegLimit | Regulatory Limit |
| Front-Wt | Front Weight | RPD | Relative Percent Difference |
| LCS | Laboratory Check Standard | RptLimit | Reporting Limit |
| LCSD | Laboratory Check Standard Duplicate | SDL | Sample Detection Limit |
| MS | Matrix Spike | surr | Surrogate |
| MSD | Matrix Spike Duplicate | T | Time |
| MW | Molecular Weight | TNTC | Too numerous to count |
| J | Estimation. Below calibration range but above MDL | | |

Qualifier Definition

| | |
|-----|---|
| B3 | Target analyte detected in method blank at or above the MDL or reporting limit. However, concentration found in the sample was >/= 10 times the concentration found in the blank. |
| L1 | Associated LCS and/or LCSD recovery is above acceptance limits for flagged analyte. Bias may be high. |
| L2 | Associated LCS and/or LCSD recovery is below acceptance limits for flagged analyte. Bias may be low. |
| M9 | Matrix Spike and/or Matrix Spike Duplicate recovery is below laboratory control limits. |
| R1 | RPD exceeds control limits. |
| U | Undetected at SDL (Sample Detection Limit). |
| V11 | CCV recovery is below acceptance limits. |

Shantall Carpenter

Released By: Shantall Carpenter
Title: Senior Project Manager
Date: 6/7/2019

This Laboratory is NELAP (T104704213-19-20) accredited. Effective: 04/01/2019; Expires: 3/31/2020

Scope: Non-Potable Water, Drinking Water, Air, Solid, Biological Tissue, Hazardous Waste

I am the laboratory manager, or his/her designee, and I am responsible for the release of this data package. This laboratory data package has been reviewed and is complete and technically compliant with the requirements of the methods used, except where noted in the attached exception reports. I affirm, to the best of my knowledge that all problems/anomalies observed by this laboratory (and if applicable, any and all laboratories subcontracted through this laboratory) that might affect the quality of the data, have been identified in the Laboratory Review Checklist, and that no information or data have been knowingly withheld that would affect the quality of the data.

This report cannot be reproduced, except in full, without prior written permission of A&B Labs. Results shown relate only to the items tested. Samples are assumed to be in acceptable condition unless otherwise noted. Blank correction is not made unless otherwise noted. Air concentrations reported are based on field sampling information provided by client. Soil samples are reported on a wet weight basis unless otherwise noted. Uncertainty estimates are available on request.

LABORATORY TERM AND QUALIFIER DEFINITION REPORT

Job ID : 19052174

Date: 6/7/2019

General Term Definition

| | | | |
|----------|---|----------|-----------------------------|
| Back-Wt | Back Weight | Post-Wt | Post Weight |
| BRL | Below Reporting Limit | ppm | parts per million |
| cfu | colony-forming units | Pre-Wt | Previous Weight |
| Conc. | Concentration | Q | Qualifier |
| D.F. | Dilution Factor | RegLimit | Regulatory Limit |
| Front-Wt | Front Weight | RPD | Relative Percent Difference |
| LCS | Laboratory Check Standard | RptLimit | Reporting Limit |
| LCSD | Laboratory Check Standard Duplicate | SDL | Sample Detection Limit |
| MS | Matrix Spike | surr | Surrogate |
| MSD | Matrix Spike Duplicate | T | Time |
| MW | Molecular Weight | TNTC | Too numerous to count |
| J | Estimation. Below calibration range but above MDL | | |

Qualifier Definition

| | |
|----|---|
| L1 | Associated LCS and/or LCSD recovery is above acceptance limits for flagged analyte. Bias may be high. |
| M8 | Matrix Spike and/or Matrix Spike Duplicate recovery is above laboratory control limits. |
| M9 | Matrix Spike and/or Matrix Spike Duplicate recovery is below laboratory control limits. |
| R1 | RPD exceeds control limits. |
| U | Undetected at SDL (Sample Detection Limit). |

Shantall Carpenter

Released By: Shantall Carpenter
Title: Senior Project Manager
Date: 6/6/2019

This Laboratory is NELAP (T104704213-19-20) accredited. Effective: 04/01/2019; Expires: 3/31/2020

Scope: Non-Potable Water, Drinking Water, Air, Solid, Biological Tissue, Hazardous Waste

I am the laboratory manager, or his/her designee, and I am responsible for the release of this data package. This laboratory data package has been reviewed and is complete and technically compliant with the requirements of the methods used, except where noted in the attached exception reports. I affirm, to the best of my knowledge that all problems/anomalies observed by this laboratory (and if applicable, any and all laboratories subcontracted through this laboratory) that might affect the quality of the data, have been identified in the Laboratory Review Checklist, and that no information or data have been knowingly withheld that would affect the quality of the data.

This report cannot be reproduced, except in full, without prior written permission of A&B Labs. Results shown relate only to the items tested. Samples are assumed to be in acceptable condition unless otherwise noted. Blank correction is not made unless otherwise noted. Air concentrations reported are based on field sampling information provided by client. Soil samples are reported on a wet weight basis unless otherwise noted. Uncertainty estimates are available on request.

LABORATORY TERM AND QUALIFIER DEFINITION REPORT

Job ID : 19052069

Date: 6/6/2019

General Term Definition

| | | | |
|----------|---|----------|-----------------------------|
| Back-Wt | Back Weight | Post-Wt | Post Weight |
| BRL | Below Reporting Limit | ppm | parts per million |
| cfu | colony-forming units | Pre-Wt | Previous Weight |
| Conc. | Concentration | Q | Qualifier |
| D.F. | Dilution Factor | RegLimit | Regulatory Limit |
| Front-Wt | Front Weight | RPD | Relative Percent Difference |
| LCS | Laboratory Check Standard | RptLimit | Reporting Limit |
| LCSD | Laboratory Check Standard Duplicate | SDL | Sample Detection Limit |
| MS | Matrix Spike | surr | Surrogate |
| MSD | Matrix Spike Duplicate | T | Time |
| MW | Molecular Weight | TNTC | Too numerous to count |
| J | Estimation. Below calibration range but above MDL | | |

Qualifier Definition

| | |
|-----|--|
| L2 | Associated LCS and/or LCSD recovery is below acceptance limits for flagged analyte. Bias may be low. |
| M9 | Matrix Spike and/or Matrix Spike Duplicate recovery is below laboratory control limits. |
| R1 | RPD exceeds control limits. |
| U | Undetected at SDL (Sample Detection Limit). |
| V11 | CCV recovery is below acceptance limits. |

Shantall Carpenter

Released By: Shantall Carpenter
Title: Senior Project Manager
Date: 6/6/2019

This Laboratory is NELAP (T104704213-19-20) accredited. Effective: 04/01/2019; Expires: 3/31/2020

Scope: Non-Potable Water, Drinking Water, Air, Solid, Biological Tissue, Hazardous Waste

I am the laboratory manager, or his/her designee, and I am responsible for the release of this data package. This laboratory data package has been reviewed and is complete and technically compliant with the requirements of the methods used, except where noted in the attached exception reports. I affirm, to the best of my knowledge that all problems/anomalies observed by this laboratory (and if applicable, any and all laboratories subcontracted through this laboratory) that might affect the quality of the data, have been identified in the Laboratory Review Checklist, and that no information or data have been knowingly withheld that would affect the quality of the data.

This report cannot be reproduced, except in full, without prior written permission of A&B Labs. Results shown relate only to the items tested. Samples are assumed to be in acceptable condition unless otherwise noted. Blank correction is not made unless otherwise noted. Air concentrations reported are based on field sampling information provided by client. Soil samples are reported on a wet weight basis unless otherwise noted. Uncertainty estimates are available on request.

Qualifier Definition

| | |
|-----|--|
| D3 | Sample dilution required due to insufficient sample. |
| L2 | Associated LCS and/or LCSD recovery is below acceptance limits for flagged analyte. Bias may be low. |
| M8 | Matrix Spike and/or Matrix Spike Duplicate recovery is above laboratory control limits. |
| M9 | Matrix Spike and/or Matrix Spike Duplicate recovery is below laboratory control limits. |
| R1 | RPD exceeds control limits. |
| S1 | Surrogate recovery is above control limit. Results may be biased high. |
| U | Undetected at SDL (Sample Detection Limit). |
| V1 | CCV recovery is above acceptance limits. This target analyte was not detected in the sample. |
| V11 | CCV recovery is below acceptance limits. |

Importance: High

Shantall,

Please analyze B-31 soil on a 24-hour rush turnaround.

Thank you.

Subject: Very Urgent, Sample B-31 soil, Memorial Drive Reconstruction, AEC Project E103-19
Importance: High

Shantall,

I mistakenly forgot to log soil sample B-31, 8-9 feet, sample collected on 5/29/19 at 9:00 on the chain-of-custody dated 5-30-19 (Lab report 19052093). A&B however should have received the sample. Since it wasn't analyzed, I assume it is on hold somewhere. Can this sample be immediately analyzed for VOCs, TPH 1005, and % moisture? Or is it past its holding time? Let me know or if you cannot locate the sample.

Thank you.

Shantall Carpenter

Released By: Shantall Carpenter
Title: Senior Project Manager
Date: 6/13/2019

This Laboratory is NELAP (T104704213-19-20) accredited. Effective: 04/01/2019; Expires: 3/31/2020

Scope: Non-Potable Water, Drinking Water, Air, Solid, Biological Tissue, Hazardous Waste

I am the laboratory manager, or his/her designee, and I am responsible for the release of this data package. This laboratory data package has been reviewed and is complete and technically compliant with the requirements of the methods used, except where noted in the attached exception reports. I affirm, to the best of my knowledge that all problems/anomalies observed by this laboratory (and if applicable, any and all laboratories subcontracted through this laboratory) that might affect the quality of the data, have been identified in the Laboratory Review Checklist, and that no information or data have been knowingly withheld that would affect the quality of the data.

This report cannot be reproduced, except in full, without prior written permission of A&B Labs. Results shown relate only to the items tested. Samples are assumed to be in acceptable condition unless otherwise noted. Blank correction is not made unless otherwise noted. Air concentrations reported are based on field sampling information provided by client. Soil samples are reported on a wet weight basis unless otherwise noted. Uncertainty estimates are available on request.

LABORATORY TERM AND QUALIFIER DEFINITION REPORT

Job ID : 19052093

Date: 6/13/2019

General Term Definition

| | | | |
|----------|---|----------|---|
| Back-Wt | Back Weight | Post-Wt | Post Weight |
| BRL | Below Reporting Limit | ppm | parts per million |
| cfu | colony-forming units | Pre-Wt | Previous Weight |
| Conc. | Concentration | Q | Qualifier |
| D.F. | Dilution Factor | RegLimit | Regulatory Limit |
| Front-Wt | Front Weight | RPD | Relative Percent Difference |
| LCS | Laboratory Check Standard | RptLimit | Reporting Limit |
| LCSD | Laboratory Check Standard Duplicate | SDL | Sample Detection Limit |
| MS | Matrix Spike | surr | Surrogate |
| MSD | Matrix Spike Duplicate | T | Time |
| MW | Molecular Weight | TNTC | Too numerous to count |
| J | Estimation. Below calibration range but above MDL | U | Undetected at SDL (Sample Detection Limit). |

Qualifier Definition

| | |
|----|---|
| L2 | Associated LCS and/or LCSD recovery is below acceptance limits for flagged analyte. Bias may be low. |
| M9 | Matrix Spike and/or Matrix Spike Duplicate recovery is below laboratory control limits. |
| R1 | RPD exceeds control limits."The sample randomly selected as QC for this batch was not part of your project. Therefore, this sample matrix is not applicable to your project samples." |
| H3 | Sample received and analyzed past hold time. |

Shantall Carpenter

Released By: Shantall Carpenter
Title: Senior Project Manager
Date: 6/11/2019

This Laboratory is NELAP (T104704213-19-20) accredited. Effective: 04/01/2019; Expires: 3/31/2020

Scope: Non-Potable Water, Drinking Water, Air, Solid, Biological Tissue, Hazardous Waste

I am the laboratory manager, or his/her designee, and I am responsible for the release of this data package. This laboratory data package has been reviewed and is complete and technically compliant with the requirements of the methods used, except where noted in the attached exception reports. I affirm, to the best of my knowledge that all problems/anomalies observed by this laboratory (and if applicable, any and all laboratories subcontracted through this laboratory) that might affect the quality of the data, have been identified in the Laboratory Review Checklist, and that no information or data have been knowingly withheld that would affect the quality of the data.

This report cannot be reproduced, except in full, without prior written permission of A&B Labs. Results shown relate only to the items tested. Samples are assumed to be in acceptable condition unless otherwise noted. Blank correction is not made unless otherwise noted. Air concentrations reported are based on field sampling information provided by client. Soil samples are reported on a wet weight basis unless otherwise noted. Uncertainty estimates are available on request.

A handwritten signature in black ink that reads "Shantall Carpenter".

Released By: Shantall Carpenter
Title: Senior Project Manager
Date: 6/11/2019

This Laboratory is NELAP (T104704213-19-20) accredited. Effective: 04/01/2019; Expires: 3/31/2020

Scope: Non-Potable Water, Drinking Water, Air, Solid, Biological Tissue, Hazardous Waste

I am the laboratory manager, or his/her designee, and I am responsible for the release of this data package. This laboratory data package has been reviewed and is complete and technically compliant with the requirements of the methods used, except where noted in the attached exception reports. I affirm, to the best of my knowledge that all problems/anomalies observed by this laboratory (and if applicable, any and all laboratories subcontracted through this laboratory) that might affect the quality of the data, have been identified in the Laboratory Review Checklist, and that no information or data have been knowingly withheld that would affect the quality of the data.

This report cannot be reproduced, except in full, without prior written permission of A&B Labs. Results shown relate only to the items tested. Samples are assumed to be in acceptable condition unless otherwise noted. Blank correction is not made unless otherwise noted. Air concentrations reported are based on field sampling information provided by client. Soil samples are reported on a wet weight basis unless otherwise noted. Uncertainty estimates are available on request.

LABORATORY TERM AND QUALIFIER DEFINITION REPORT

Job ID : 19060194

Date: 6/11/2019

General Term Definition

| | | | |
|----------|---|----------|-----------------------------|
| Back-Wt | Back Weight | Post-Wt | Post Weight |
| BRL | Below Reporting Limit | ppm | parts per million |
| cfu | colony-forming units | Pre-Wt | Previous Weight |
| Conc. | Concentration | Q | Qualifier |
| D.F. | Dilution Factor | RegLimit | Regulatory Limit |
| Front-Wt | Front Weight | RPD | Relative Percent Difference |
| LCS | Laboratory Check Standard | RptLimit | Reporting Limit |
| LCSD | Laboratory Check Standard Duplicate | SDL | Sample Detection Limit |
| MS | Matrix Spike | surr | Surrogate |
| MSD | Matrix Spike Duplicate | T | Time |
| MW | Molecular Weight | TNTC | Too numerous to count |
| J | Estimation. Below calibration range but above MDL | | |

Qualifier Definition

| | |
|-----|--|
| L2 | Associated LCS and/or LCSD recovery is below acceptance limits for flagged analyte. Bias may be low. |
| M8 | Matrix Spike and/or Matrix Spike Duplicate recovery is above laboratory control limits. |
| M9 | Matrix Spike and/or Matrix Spike Duplicate recovery is below laboratory control limits. |
| R1 | RPD exceeds control limits. |
| S8 | Target compounds caused elevation of baseline. Surrogate may be biased high. |
| U | Undetected at SDL (Sample Detection Limit). |
| V11 | CCV recovery is below acceptance limits. |

Shantall Carpenter

Released By: Shantall Carpenter
Title: Senior Project Manager
Date: 6/14/2019

This Laboratory is NELAP (T104704213-19-20) accredited. Effective: 04/01/2019; Expires: 3/31/2020

Scope: Non-Potable Water, Drinking Water, Air, Solid, Biological Tissue, Hazardous Waste

I am the laboratory manager, or his/her designee, and I am responsible for the release of this data package. This laboratory data package has been reviewed and is complete and technically compliant with the requirements of the methods used, except where noted in the attached exception reports. I affirm, to the best of my knowledge that all problems/anomalies observed by this laboratory (and if applicable, any and all laboratories subcontracted through this laboratory) that might affect the quality of the data, have been identified in the Laboratory Review Checklist, and that no information or data have been knowingly withheld that would affect the quality of the data.

This report cannot be reproduced, except in full, without prior written permission of A&B Labs. Results shown relate only to the items tested. Samples are assumed to be in acceptable condition unless otherwise noted. Blank correction is not made unless otherwise noted. Air concentrations reported are based on field sampling information provided by client. Soil samples are reported on a wet weight basis unless otherwise noted. Uncertainty estimates are available on request.

LABORATORY TERM AND QUALIFIER DEFINITION REPORT

Job ID : 19060383

Date: 6/14/2019

General Term Definition

| | | | |
|----------|---|----------|-----------------------------|
| Back-Wt | Back Weight | Post-Wt | Post Weight |
| BRL | Below Reporting Limit | ppm | parts per million |
| cfu | colony-forming units | Pre-Wt | Previous Weight |
| Conc. | Concentration | Q | Qualifier |
| D.F. | Dilution Factor | RegLimit | Regulatory Limit |
| Front-Wt | Front Weight | RPD | Relative Percent Difference |
| LCS | Laboratory Check Standard | RptLimit | Reporting Limit |
| LCSD | Laboratory Check Standard Duplicate | SDL | Sample Detection Limit |
| MS | Matrix Spike | surr | Surrogate |
| MSD | Matrix Spike Duplicate | T | Time |
| MW | Molecular Weight | TNTC | Too numerous to count |
| J | Estimation. Below calibration range but above MDL | | |

Qualifier Definition

| | |
|-----|--|
| L2 | Associated LCS and/or LCSD recovery is below acceptance limits for flagged analyte. Bias may be low. |
| M8 | Matrix Spike and/or Matrix Spike Duplicate recovery is above laboratory control limits. |
| M9 | Matrix Spike and/or Matrix Spike Duplicate recovery is below laboratory control limits. |
| U | Undetected at SDL (Sample Detection Limit). |
| V11 | CCV recovery is below acceptance limits. |

**Limited Phase II Environmental Site Assessment
Memorial Drive Reconstruction, Houston, Texas**

**APPENDIX F
RESUME**

ROBERT J. METZGER, PG, CAPM

| | |
|----------------------|--|
| POSITION | Senior Geologist for 17 years Aviles Engineering Corporation, Houston, Texas |
| EDUCATION | Bowling Green State University, Bachelor of Science in Education - Earth and Biological Sciences Bowling Green State University, Master of Science – Geology |
| REGISTRATIONS | Texas Registered Professional Geoscientist License No. 1133 Texas Commission on Environmental Quality Corrective Action Project Manager No. 01418 Certified with 40-Hour OSHA Hazardous Material Health and Safety Training and 8-Hour Refresher |
| EXPERIENCE | <p>Conducted Phase I and Phase II ESAs for the City of Houston Department of Public Works and Engineering Projects:</p> <ul style="list-style-type: none">• 108-Inch Water Line from Union Pacific Railroad to John Ralston ESAs I and II• Gessner Drainage and Paving ESA-I• West Orem Force Main ESA-1• Dunlay Paving and Drainage-From W. Main to Richmond Avenue ESAs-I and II• Houston Avenue Paving and Drainage Project ESAs I and II• ESAs I and II, 24-Inch Water Line Replacement along West Airport Boulevard• ESA-I: Proposed 72-inch Diameter Water Line From Dowling to Tuam along Polk, Hutchins, Clay, Chenevert, Hadley, and Crawford, Contract 9E• 66-Inch Storm Water Repair ESA-I• TIRZ 17 Reconstruction of Memorial Drive Between West Sam Houston Parkway and Tallowood Road• Riverwood Estates No. 1 Lift Station and Force Main• Harvey Wilson Drive and Armour Drive Reconstruction• Jensen Drive Pump Station Valve Box and Pipeline• Polk Street Underpass Storm Water Inlet Replacement• Park Row Road from State Highway 6 to Eldridge Parkway• Heights Area Waterline Replacement• West Little York Street Reconstruction from Deep Forest Drive to TC Jester Boulevard <p>Phase II Environmental Site Assessment: Toyota Center, Houston, Texas: Conducted comprehensive Phase II ESA of a six-block site to assess and delineate contaminated soil and groundwater prior to construction of the Toyota Center.</p> |

**EXPERIENCE,
continued**

Houston Airport Systems Hobby Airport Taxiway H Phase II Environmental Site Assessment: Conducted Phase II ESA for expansion of Taxiway H at Hobby Airport, which included advancement of soil borings, installation of temporary groundwater monitoring wells and soil and groundwater sampling. Prepared Phase II ESA report.

Environmental Sampling and Analysis during Geotechnical Investigation for Proposed United Airlines Terminal C Ramp and Apron BIAH Airport: Two soil samples were collected from each of 20 boreholes for environmental analysis during geotechnical field work. Samples were also collected in bags for photoionization detector (PID) readings of organic vapors. Prepared and edited letter report.

Environmental Soil Sampling and Analysis Woodhouse Paving Phase I and II Project Areas at Port of Houston Authority: During the Phase I Project, surface concrete was cored, a soil boring was conducted from the soil surface to 18 inches below the surface, and a soil sample was collected from each boring at 20 locations. During the Phase II Project, six soil borings were drilled to 4 feet below the ground surface (bgs), two borings were drilled to 10 feet bgs, and two borings were drilled to 30 feet bgs. One to two soil samples were collected from each boring for a total of 14 samples. Each of the soil samples collected during Phase I and Phase II was submitted to a commercial laboratory for analyses of the following potential environmental contaminants:

- Total petroleum hydrocarbons
- Total RCRA metals
- Volatile and semi volatile organic compounds
- Polychlorinated biphenyls (PCBs)
- Herbicides and Pesticides

Following analysis, a report was prepared for each project area describing the soil boring and sampling procedures, and the results of the laboratory analyses. Concentrations of contaminant in the soil samples were compared to applicable TCEQ standards.

Additional Phase II Environmental Site Assessments

- City of Pasadena Strawberry Road Improvements from Cherrybrook Lane to Spencer Highway.
- City of Pasadena Strawberry Road Improvements from State Highway 225 to Harris Avenue.
- Property at 44 Aldine Bender Road impacted by adjoining leaking underground storage tank site.
